Module 4: Branching and Merging in Git

Assignment

edureka!

edureka!

Assignment

→ Create a local branch using git checkout -b branchname command

→ Observe the difference by doing some file operations and switch back to the master branch and see if you can see the changes done on the branch

→ Now switch back to the branch and commit the changes and switch to master branch. Now see if you can still see the changes in the master branch

→ Now switch back to the branch name and stash the changes and apply the changes to the master branch by switching to the master branch

→ Try merging the changes from the branch to the master branch using all the three merge strategies and then view the git log

→ Push the local branch to the remote repository and see if the branch is present on the remote repository - Github
